PURSUANT TO 37 C.F.R. § 1.121(c)(1)(i)

30. A method for producing plant virus particles comprising: a) providing i) plant viral nucleic acid comprising nucleic acid which codes for a coat protein, ii) a foreign nucleotide sequence coding for a foreign peptide; b) modifying said plant viral nucleic acid by inserting said foreign nucleotide sequence coding for a foreign peptide at a site within said plant viral nucleic acid which codes for the coat protein so as to create modified viral nucleic acid comprising an insert, wherein said site is free from direct sequence repeats flanking said insert; c) infecting plant material selected from the group consisting of plants, plant tissue, plant cells and protoplasts with said modified viral nucleic acid to produce assembled particles of a modified virus; and d) harvesting assembled particles of the modified virus from said plant material.
